

Why choose home dialysis?

With home dialysis, treatment fits into your life—not the other way around. Home dialysis gives you the flexibility you need to keep doing the things you love while helping you feel your best. Talk to your care team about making the switch to home.

Benefits of home dialysis

Freedom and flexibility

Along with your doctor or nurse's advice, you can choose a treatment schedule that gives you the flexibility to keep the social, school, or work life you love.

Explore fewer restrictions

You may have the opportunity to explore fewer food and drink restrictions and the possibility of fewer medications.

Fewer trips to the center

By reducing the number of trips to the dialysis center, you have more time for yourself—and no weather-related travel worries.

Regular monitoring

With PatientHub, you and your care team can easily track your treatment progress and stay connected between your monthly visits.

Community and connection

Our Kidney Care Community allows you to engage with others to learn more, find support, and share experiences.

24/7 on-call nursing

You have access to our 24/7 nurse line for support anytime, day or night.
